

# 710R

## R134a

## KONFORT 710R

### THE IDEAL SOLUTION FOR RECHARGING ONLY R134a

Because this is still a period of transition, TEXA has no intention of ignoring the demand for recharge stations for the older refrigerant, and is committed to making the advanced technology of its Series 7 stations available for use with R134a. With this in mind, TEXA has produced the KONFORT 710R, specially designed to satisfy the needs of garages who want an "entry level" system only for R134a which, after all, is still the most common refrigerant in vehicle A/C systems. Though it is TEXA's entry level model, the KONFORT 710R nevertheless provides as standard all the essential functions that have established the KONFORT 700 Series as the best recharge stations on the market. Features include automatic leak detection, electronic refrigerant weighing, automatic timed oil and UV tracer injection, and high efficiency refrigerant recovery (over 95%).

#### MAIN FEATURES

- R134a compatible
- High visibility, 4x20 character, blue backlit LCD screen
- Management of DATABASE and service records by SD card
- 10 kg tank
- Double stage vacuum pump
- Charging pressure +/- 15 g
- High efficiency refrigerant recovery (over 95%)
- Automatic oil injection (timed function)
- 2 manual recharging line control valves
- Functioning modes:
  - DATABASE
  - PERSONALISED SERVICE
  - MY DATABASE
- Multi-language software
- Automatic compensation for length of recharging lines
- Automatic maintenance alarm
- Simplified maintenance
- Automatic management of non-condensable product

#### OPTIONAL

Vehicle flushing kit, thermal printer.
